

ABSTRACT

The invention relates to a device (5) for memorizing a list of items
5 intended to memorize any item (J) that was last presented to it. It comprises a
first memory (3) and means responsible, when the first memory is full and when
a new item has to be memorized, for randomly selecting an item memorized in
the first memory to remove this selected item and to memorize the new item
presented.

10 It also relates to a method for memorizing an item (J) in such a
device (5).
